

Drone Surveyors Filton

[Drone Surveyors Filton](#)

At South West Surveys we run our own in-house drone surgical procedures with fully covered with insurance, CAA accredited pilots. Drones are a great tool to our surveying arsenal, gathering data from otherwise unattainable areas and regions of high risk like railways, motorways, dilapidated constructions or small islands. Covering up large parts of land, from open farmland to woodland, our lidar system can permeate tree canopies and chart the ground under. Drones can provide you using a wealth of data which includes plant health and vigour, weed location and denseness, precise region dimensions and elevation alterations across your land.
