Good day! My name is Ashley Block, I am 26 years old, I live in San Francisco. I work in the field of web design, my last project is <u>https://kampillen.de/</u>

Today I will tell you about who the web designer as a whole is. And also about what are the features of this profession.

A web designer is a person with an artistic taste and knowledge of Internet technologies who creates Web pages and integrates them into Web sites. The main task of the web-designer is to design an Internet project so that as many users as possible become interested in them. The profession is suitable for those who are interested in drawing and computer science. The profession of a web-designer appeared only with the emergence of the World Wide Web (WWW) computer network, in which the creation of web-sites for advertising purposes is possible (late 1980s - early 1990s). A web designer is a person with an artistic taste and knowledge of Internet technologies who creates Web pages and integrates them into Web sites. The main task of the web-designer is to design an Internet project so that as many users as possible become interested in them. The profession of a Web designer includes two aspects: the ability to use special computer programs and design activities.

The specific task of the web-designer is to be able to develop the style of the project, taking into account the specifics of the Internet. That is, in addition to the design of the project was just stylish, it must meet the standard requirements of the network: graphic elements (logos, banners, drawings, etc.) must be optimized, when choosing colors and fonts, you must take into account the fact That the user will see the graphic embodiment of the project on the monitor, and not on paper. The web designer is responsible for how the Internet site looks and feels. He comes up with logos, banners and other graphic elements, thinks through the site navigation, determines where the text should be placed. The designer needs not only to create an interesting site, but also to take into account the time of its loading. The creation of interactive web sites - aerobatics web-design.

To make such a site, a web designer must not only be proficient in HTML and have artistic flair, but also simply must know "classical" programming and understand the databases.

In addition to websites, web designers develop banners, online postcards, and electronic presentations.

Thanks for attention!:)
