

All In One Funeral Home Software

Death care management is the primary objective of funeral home software. It is the easiest and most efficient way to handle funeral homes. The system automates the funeral paperwork into e-statements in order to save time. Funeral software is programmed to access and manage the whole event from anywhere using the internet.

[Funeral home management software](#) makes it easy for family members as the software prints death certificates, funeral contracts, veterans forms, social security forms, transit permits, and more. Funeral software has built in tools to accept service requests with Live Request Tool. The request will be processed and funeral directors will respond to the funeral requirement.

[Continental Computers](#) has built custom funeral home management software for over thirty years. The service request and process tool “The Smart Director” has been developed for giving priority to customer service. The user-friendly software end user point allows multiple users to submit data. The tool allows end user to personalize their dashboard and edit changes to the data. The software is programmed to process the multiple data requirements to furnish an acceptable solution. The scalability of the software is immense. Capable of handling anything from single users to hundreds of users all at the same time “The Smart Director™” supplies the solution.

Crematory software is an efficient tool that tracks the crematory management information. The software has a great input from many crematories based on extensive onsite death care market research. Cremation software is a robust software solution for tracking the cremation process, client billing, equipment usage and maintenance, and forms generation and customization. A single point of entry to show the status of cremains/body, accounts receivable management, and updates equipment usage. The Crematory Manager is a very powerful and flexible tool that provides the crematory the added advantage.

Cemetery Manager is the tool that easily maintains your burial space information. The software optimizes your cemetery searches, accounting and inventory data. The basic feature of the tool includes storage to maintain records on survivors for future to know when and where individuals are buried. There are hundreds of pre-designed document templates available to draft your funeral reports.

The “After Care Manager” provides with a valuable tool to set up monthly Meetings and inviting multiple survivors, schedule a series of events targeted to provide the Survivor with the support and guidance needed to restore a sense of peace and get back on track in their lives.
