

Types of Contact Lenses for Vision Impairment

Contact lenses are made from a very thin material. They are placed right over the surface of the eye. Some of the lenses are soft and flexible, and some are hard. Most contact lenses are used for the purposes of improving impaired vision. Some individuals with impaired vision will choose contact lenses over glasses. Not everyone is a good candidate. An eye doctor is the best person to determine whether contact lenses are a better option than glasses. Here is [color contact lenses online](#) on the types of contact lenses available for vision impairment.

Multifocal Contact Lenses

The multifocal contact lenses are often prescribed for someone who has trouble focusing on objects that are close. These lenses are also available with bifocal capabilities and allow wearers to see better at a distance or close up. Soft or hard lenses can be multifocal, and the type ordered will depend on what the individual prefers. These will serve the same purpose as a pair of bifocal glasses and can help correct or improve impaired vision. There may be more than one type of eye disorder that will require this type.

Lenses for Astigmatism

Sometimes, eyes have a defect in their shape. [coloured contact lenses uk](#) of the eye may not be rounded as it should be. When this happens, it causes images to be distorted, and light rays do not exchange properly. This can cause major vision impairment. There are lenses made that will help correct the vision problems related to astigmatism. There are a variety of the toric lenses available when ordering Contact Lenses Online.

Lenses for Presbyopia

Age plays a major part in presbyopia. It is due to the hardening of the lens on the eye. This can cause disturbances in vision and has a negative impact on the ability to see things that are nearby. The nearby objects are often blurred. [coloured contact lenses online australia](#) can diagnose this problem by performing vision tests. After diagnosis, the medical professional will determine what type of prescription lenses are needed.

The key to getting the right type of lenses that will help correct impaired vision is to first consult an eye doctor. Patients will undergo routine testing that will help determine the source of vision problems. There may be some instances where there is more than one eye disorder present. The best value in contact lenses is often found online. It's a great place to start when looking for quality contact lenses at an affordable price.
