

# MS Polymers Market to 2027, Future Outlook, COVID-19 Impact Analysis, Forecast 2021-2027

The global MS polymers market is anticipated to grow at a CAGR of 6.8% during the forecast period (2021-2027). The supportive government policies for the protection of the environment are expected to fuel the market growth of MS polymers. For instance, the North American and European countries have implemented regulations for the use of solvent and isocyanate-free adhesives.

Restriction of Chemicals, United States Environmental Protection Agency, and Leadership in Energy and Environmental Design are amongst few organizations which had banned the use of harmful substances including organotins, mercury, monomeric isocyanates, pyrrolidones, phthalates, and nonylphenols in the manufacturing of adhesives and sealants. Thus, the rapidly growing concern towards environmental protection is the major driving factor for the market growth.
