139249843 326387095549 139249390 326386028098

1:Initializing function q:326386028098 t:Function called at 07:47:47.707

The following values were passed as parameters to the function:

<table>ImageFile;%ImageFile%

Options;%Options%</table>

The following script settings were inherited from the current thread:

<table>Thread Name;%A_ThisLabel%

Working Dir;%A_WorkingDir%

Batch Lines;%A_BatchLines%

Title Match Mode;%A_TitleMatchMode%</table> c1:ImageFile:2archive c2:Options:dx

c3:A_ThisLabel:!k c4:A_WorkingDir:C:\Scripts\AHK\Arkiver c5:A_BatchLines:10ms

c6:A_TitleMatchMode:1 l:160

2:Parsing options t:The information passed to FindClick() through the options parameter (2nd param) will now be parsed into individual script settings. q:326386028370 l:176

3:dx q:326386028420 t:<table>Option ID;dx

Description;Diagnostic Mode

New value;%dx%

Assign type;User default</table>

User default means that the option was indicated without a value so the value defaulted to this string l:195 c1:dx:StartAt=#

2:Other script settings q:326386028493 l:29 c1:Center:1 c2:Silent:0 c3:Delim:

c4:Count:0 c5:CharX:x c6:CharY:y c7:CharN:n c8:Sleep:20 c9:Stay:0 c10:Func: c11:Err:

m;%m%
x;%x%
y;%y%
o;%o%
n;%n%
k;%k%
r;%r%
e;%e%
a;%a%
w;%w%
t;%t%
f;%f%
</table>
1:Preparing Image File q:326386029384 t:The image file that was specified for use with imagesearch must now be located on the hard drive, and its size must be measured. l:225
2:ImageFile not seen before q:326386029469 t:Image file "2archive" has not been seen before by the function so it will now look through the default locations to find the full image path. l:10 d:2
3:(Working Dir) q:326386029484 t:Directory #1 is:
%ThisDir%
(This can be specified at the top of the script in DefaultDirs.) c1:ThisDir:
4:2archive q:326386029697 t:Trying file path:
%ImageFilePath%
File does not exist. c1:ImageFilePath:2archive d:1 l:272
4:Image file found q:326386029949 t:Trying file path:
%ImageFilePath%
Image file found! c1:ImageFilePath:2archive.png l:285 d:1
2:Image Preview - Measuring width and height q:326386030041 t:The image dimensions will be measured by quickly creating an AutoHotkey GUI containing the image. This is a relatively CPU-intensive step but only need be done once per session - the information is stored in the cache for future calls with the same image.
<table>Image Width;%ImageW%
Image Height;%ImageH%</table> g:Add,Edit,+ReadOnly -VScroll w330,2archive.png;-E0x20 +Caption +SysMenu;Add,Picture,+Border xp y+10 w330 h-1,2archive.png;Show,NA,Preview of image c1:ImageW:22 c2:ImageH:18 l:311 d:5
1:Preparing other script settings q:326386184733 t:If additional options were specified, FindClick() may need to prepare certain settings relevant to these options before performing the imagesearch. l:401
1:Searching for image q:326386185384 t:The actual ImageSearch portion of the script will

now begin. This is generally the most CPU-intensive portion of the script. l:514

2:Search #1 q:326386185395 t:Searching and clicking, if applicable. g:+.*
(Performing|Found).* l:520

3:Performing ImageSearch q:326386185423 t:The following line of code will execute:
%Code_Orig%

Type of region: Normal l:561 u:http://www.autohotkey.com/docs/imagesearch

o d:5 c1:Code:ImageSearch, FoundX, FoundY, -1366, 616, -1 + 0, 1383 + 0, 2archive.png
