

# How To Do Netgear AC1200 WiFi Range Extender Setup?

Netgear AC1200 WiFi extender supports AC dual-band technology and gives an extremely fast network range of up to 1200 Mbps. It allows 2.4 GHz and 5GHz frequency bands to extend the signals to pathetic network recipient zones. Unlike other ordinary WiFi range extenders, it connects the router to the WiFi extender in a Fastlane connection. To attain its advantages, you need to do the [Netgear AC1200 WiFi range extender setup](#). For that, you can use the [Netgear AC1200 WiFi range extender manual](#), and it will take you through the setup procedure conveniently. This blog will also explain the methods to do the Netgear AC1200 WiFi Range Extender Setup.

The Netgear AC1200 WiFi range extender setup can be performed using two methods, one is with the help of an internet browser method, and the other is the WPS push button method. Let's discuss them one by one;

## Netgear AC1200 WiFi Range Extender Setup Via WPS -

Use the WPS button setup your Netgear wifi range extender in just a few moments and effortlessly;

- **Step 1:** Keep your WiFi extender and router in the same room.
- **Step 2:** Plug the Netgear AC 1200 extender into a power outlet and then switch it on.
- **Step 3:** Press the WPS button on your WiFi router.
- **Step 4:** After a few seconds, press the WPS button on your wifi extender also.
- **Step 5:** Wait for the devices to establish a connection.

Finally, the router and extender will be connected and ready to use.

## Netgear AC1200 WiFi Range Extender Setup Via Internet Browser -

With the help of the WPS button, the WiFi extender setup process becomes quite easy, but you can also set up your extender using the installation assistant. Go through the instructions stated below to do the **Netgear AC1200 setup** using the web browser:

- **Step 1:** Keep your WiFi extender and your wireless router in the same room.
- **Step 2:** Plug the WiFi range extender into a power socket and then switch it on.
- **Step 3:** On your PC device open the WiFi settings and then look for the WiFi range extender's extended network.
- **Step 4:** Then you must open a web browser of your preference.
- **Step 5:** Then, log onto the web page [myWiFiext.net](http://myWiFiext.net).
- **Step 6:** To log in to your range extender's settings, enter your username and password in their allotted fields.
- **Step 7:** After logging in, the Netgear installation assistant will display on your screen.
- **Step 8:** Now walk ahead with the on-screen guidelines and then proceed with the setup.
- **Step 9:** Finally, detach the WiFi range extender from its current plug point and then plug it anywhere in the home or office.
- **Step 10:** Ensure that there are no radioactive devices nearby because they hinder the signals.
