

How to choose lighting fixtures for urban building lighting?

How to choose lighting fixtures for urban outdoor [best light city](#) projects? At present, building lighting can be seen everywhere in the city. Outdoor buildings can not only illuminate buildings, but also play a role in advertising and brand promotion. So what lighting fixtures are generally used in outdoor building lighting projects?

The LED lamps generally used in outdoor building lighting include LED line lights, LED wall washers, LED floodlights, LED guardrail tubes, and LED point light sources. These outdoor lighting lamps. Among them, led line lights and led guardrail tubes are mainly used to outline the building outline or form a dynamic large screen, while led wall washers are mainly used to illuminate the exterior walls of buildings.

LED floodlights are used to partially illuminate building pillars or tops. Its illumination height is relatively high, but the light width range is not far. LED point light sources mainly play the role of embellishing lighting for buildings. Many buildings will install a point light source on each floor for decoration. However, there is another function to be used as a dynamic dot matrix screen.
