

Living with Bronchiectasis during COVID-19 Pandemic

Numerous standard imaging elements of this illness are depicted, like, two-sided multi-lobar ground-glass opacities (GGO) or combinations with overwhelmingly fringe dissemination. Coronavirus-related bronchiectasis is an abnormal finding, and it's anything but a regularly depicted continuation of the sickness.

[Bronchiectasis](#) is a lung condition that causes coughing up mucus. The bronchi, in the lungs, are the entries that allow air to enter the lungs. In bronchiectasis, within surfaces of the bronchi get thicker over the long haul from irritation that leaves scars.
