Oracle Database Cloud Service Operations Certified Associate Certification Overview

Administrators study the key aspects of functionality of the Oracle Database Being a Service (DBaaS) implementation: using them since they develop, deploy, administer, and tune DBaaS.

The test concentrates on these tasks:

Creating a DBaaS instance (instead of a Database instance)

Administering the Oracle Database Cloud Service instances

Configuring Xserver and Xterminal connections; hook up to a VM through SSH

Configure SSH for Unix and Linux users

Enable usage of a port within a Virtual Machine

Backup (default, customized, on-demand) and Recovery

Using Database Administrator tools like DBCA, SQL Developer, Database Express and SQL*Plus

Utilize the Oracle Cloud Database Monitor web application to monitor and manage your Oracle Database.

Plug/unplug, perform remote cloning, use RMAN and SQL*Loader emigrate data

Secure your cloud database, secure your network access and applications, administer Oracle REST data services

Within Half an hour of completing your Oracle 1Z0-160 Certification exam, you will receive a contact from Oracle notifying you that the exam results are accessible in CertView. If you have previously authenticated your CertView account, simply login and choose the possibility to "See My New Exam Result Now".
