

# Non-Woven Industrial Membrane Market – Global Opportunities & Forecast, 2020-2027

## Non-Woven Industrial Membrane Market

The GMI Research report anticipates that the [Non-Woven Industrial Membrane Market](#) will experience a noteworthy boom over the forecast period. The rising usage of nonwoven industrial membranes in wastewater treatment solutions and the pharmaceutical industry will proliferate the market growth.

## Non-Woven Industrial Membrane Market Dynamics

Rapid industrialization across emerging nations such as India and China is one of the foremost forces complementing the growth of the Non-Woven Industrial Membrane Market. Also, as per the [Non-Woven Industrial Membrane market analysis](#), the rising awareness in the population about the water treatment systems, along with the constant government support in water plants, has strengthened the market growth. According to European Investment Bank, in 2019, the Mariupol and Government of France city council have underwritten a declaration concerned with the enhancement of municipal water supply infrastructure in Mariupol. They invested nearly Euro 35 million in the development of the Mariupol water supply and wastewater management system. The rapid surge in the manufacturing industry, primarily power generation and chemical processing, has elevated the market growth.

On the other hand, the global **Non-Woven Industrial Membrane market research** asserts that the filtration of fine particles results in high coal secretion. Several managerial bodies have enforced laws related to the riskless ejection of innocuous waste materials. For example, the US Environmental Protection Agency proposed National Program for Greenhouse Emission intended to promote viable growth in the nation. Thus, the rising number of such programs is likely to restrain the market growth. Moreover, with the disruption in the supply-demand chain during the crisis, the market is experiencing several ups and downs, primarily in 2021.

## Module Type Segment Drivers

Based on the module type, the global non-woven industrial membrane market can be hinged into the tubular, spiral wound, plate & frame (PF), and hollow fiber membrane. Among these, the spiral wound segment is likely to dominate the overall market by seizing the highest share over the coming years. As stated by the **global Non-Woven Industrial Membrane market report** this is because they offer various advantages such as reduction in the cost and provide a better level of energy due to huge packaging weight. Due to the growing espousal of modules in the dairy, pharmaceutical, and food & beverage industry, robust demand for modules is projected primarily for spiral wound membranes.

### **About GMI Research**

GMI Research is a market research and consulting firm which provides market insights and intelligence across 12 major sectors helping our clients in making effective investment and business decisions.
