

Converting Tracks to WAV Documents

Home recording on a PC requires just a couple of things; some type of computer, recording software (i.e. Pro Tools, Cakewalk, Cubase), and an electronic digital soundcard. In the event that you are going to be recording multiple tracks from multiple sources at once, you might want to invest in a mixer as well. (This is assuming that your sound card only has one audio input) This allows you input more than one instrument/microphone to your computer at exactly the same time. Install your recording software and sound card drivers. Plug your mixer into your sound card, plug your instruments into your mixer and you're ready to begin recording. The recording process might be a little different depending on which software you are using, but most decent software comes with a good instructions which you can consult if you're having problems. After recording, you may wish to mix all tracks down seriously to a music audio .wav file.

Now that people have our recording done and our .wav file in hand, we'll desire to convert it to an MP3 file. In the event that you are going to be burning your tracks to CD, you won't have to convert it to an MP3 file. However for distribution for music downloads online, the littlest, highest quality, most universally accepted format will undoubtedly be an MP3 file. You are able to take your .wav file and export it as an MP3 through whatever audio recording program you use. Most recording software offers that option, but bear in mind that you might need to wreck havoc on the output settings to get the very best quality MP3 from the program. Another option is to utilize a stand-alone .wav to MP3 converter. In the event that you visit download.com and search for ".wav to .mp3 converter", you will be given a good set of programs that just that. I have had accomplishment using both methods, so it is as much as you. [youtube to mp4](#)

Once you have your MP3 files, you can set-up your personal website and offer free music downloads. Or you are able to go to one of the many sites that provide free web hosting for musicians, so the musicians can have a spot to supply downloadable music MP3s, music videos, and music lyrics. Sites like, DiskFaktory Jams and Section Z are generally free and have other tools for musicians to get into, like message board forums and internet radio stations. Once you've your recording done, the number of choices are endless!
