

Bug title: Handling of items.dateaccessioned in the item editor

This bug report is for the community to decide which of the following is desired for handling of the dateaccessioned field in the item editor:

1. A hint - To tell users if they leave the items.dateaccessioned field (which is typically linked to the 952\$d subfield) empty when adding a new item in serials, cataloguing, or acquisitions then Koha will automatically save the current date in that field.

OR

2. Context-aware behaviour - Koha only pre-fills the item editor dateaccessioned field with the current date when the item is added/new.

Shifting this discussion away from bug 29963 so that can proceed to upstream the reversion of bug 29815
