How to Check your Website is Mobile Friendly?

In this situation you just need a mobile friendly website. These websites are popularly known as responsive websites. These websites feature self-shielding for screens of any size. Due to this feature, the website can be easily obtained from mobile phones, mobile gadgets, tablets, desktops and laptops. When accessing the website from a mobile gadget, the user gets better browsing experience.

These websites offer extensive flexibility when it comes to browsing using mobile phones. In them, the web page automatically adjusts the width of the screen. In addition, there is no effect on images as well as font size. This means that you get an amazing experience when browsing the website using a mobile phone. There are many advantages associated with responsive websites. First and foremost, you only have to manage one website. In the past,

there are two websites i.e. a desktop version and the other is the mobile version that had to be maintained. This is not in the case of using this technique. Secondly, you don't lose any customers who reach your web via the Internet. Finally, these are cost-effective.

Now a very pertinent question arises as to how to check your website mobile friendly or not. The answer is simple just use mobile phones with different screen sizes on your website. The mobile friendly website will provide you with an amazing web browsing experience in each case. These templates provide a full view of a web page under different versions of responsive websites.
