What are Carbon credits?

[Carbon credits](#) are the most common and trending subject in the NFT market nowadays. Any other organizations around the world are permitted to emit a certain amount of carbon dioxide or any other greenhouse gases and this concept is known as a carbon credit. One carbon credit allows for the emission of one ton of CO₂ or the equivalent of other greenhouse gases and is known as the Cap and trade program.

Carbon Credits NFT Marketplace Development

As the best marketplace development, Coinjoker tokenizes the carbon credits market by utilizing blockchain technology and the efficiency of NFTs to improve the carbon offset trading market's transparency, liquidity, and dependability. Also, we create a transparent and decentralized market where buyers, entrepreneurs, and issuers of carbon credits can profitably sell their unused carbon credits in the form of NFTs. Our objective is to create a safe and open market where businesses and individuals can credit worthwhile ones with Coinjoker.

The company can sell unused credits to another organization that needs them. Carbon credits are a mechanism for reducing CO2 & gas emissions.

What are the premium features of NFT Marketplace for Carbon credits?

- Staking - The NFT staking option will be incorporated into the platform as an added benefit. The NFT holders will have the additional option of staking their NFTs and getting their rewards or tokens that are based on the staking period
- Search Refiner - By using the search refiner to find the type of NFTs they want to buy it
- NFT Storefront - NFT Storefront functions act as a pipeline between the buyer and the list of NFT marketplace. The sellers will list their [carbon credits NFTs](#) which contain all the detailed information such as descriptions and budget
- Ranking - The total number of NFTs available on the market will be ranked based on their trading volume, capacity, and the number of owners to schedule
- Auction Portal - The Sellers must first pay the bidding costs before mentioning the opening bid sum and expiration date., then the auction portal makes it easier to sell NFTs by accepting bids.
- Digital crypto wallet - The cryptocurrency required for trading is kept in a crypto wallet together with the NFTs the user purchases and sells. Existing cryptocurrency wallets include meta-mask, Coinbase, exodus, electrum, etc.
