## MIRAT | SUITS YOUR IT ASSET DISCOVERY NEEDS

### OVERVIEW

For the last several years, companies are moving towards IT diversified environment which includes cloud, virtual, and mobile devices. The companies decided to make a common place for connecting or disconnecting the enterprise network. All these developments put a challenge in front of them to maintain and control the technologies in a most lucrative way. The network security is one of the most challenging tasks to them. It is somewhat difficult to control the malicious intruders into your network as the network is using different modes like desktops, laptops, and smartphone. Because of the advanced cyber threats, companies focused on their IT assets. Therefore, many companies come into the market with the IT Asset Discovery Tools to help the IT companies.

### HOW THE IT DISCOVERY TOOL WORKS?

Generally, the asset discovery tools provide the following services.

- It diagnoses and resolves the problems.
- Maintenance of Assets.
- Mitigate the security risks.
