

Mobile vs Laptop which is more needed?

The mobiles can do almost everything that a laptop can do but the laptops do it with speed and easy also with the big screen. Almost all the task can be performed in both the devices, but they are better in their ways.

There are many factors on which both are better according to their use. Mobile are very useful while you are on the go and still need to do some work as nowadays you can't stop all your work.

Laptops are also portable but not portable as the mobile phone as to use a laptop you need to stay at a place and internet connection in mobile you can get quite easily from anywhere with the help of mobile data but in laptops, we don't have any option of mobile data so to get internet connection you need to connect to a Wi-Fi which should be available or connect a dongle or ethernet cable.

The differences in mobiles and laptops are: -

Display and screen

- Laptops usually have a bigger screen than a mobile, so it is easy to work in it and also typing in a keyboard is way more faster than laptops.

- Mobile have a very tiny screen as compared to the laptop and also working on it is not so practical and the typing with a touch screen is little tough.
- Mobile screens are ideal for watching videos or photos but not to work on it.
- Laptop display are perfect to work on like typing, video editing and photo editing.

Storage capacity

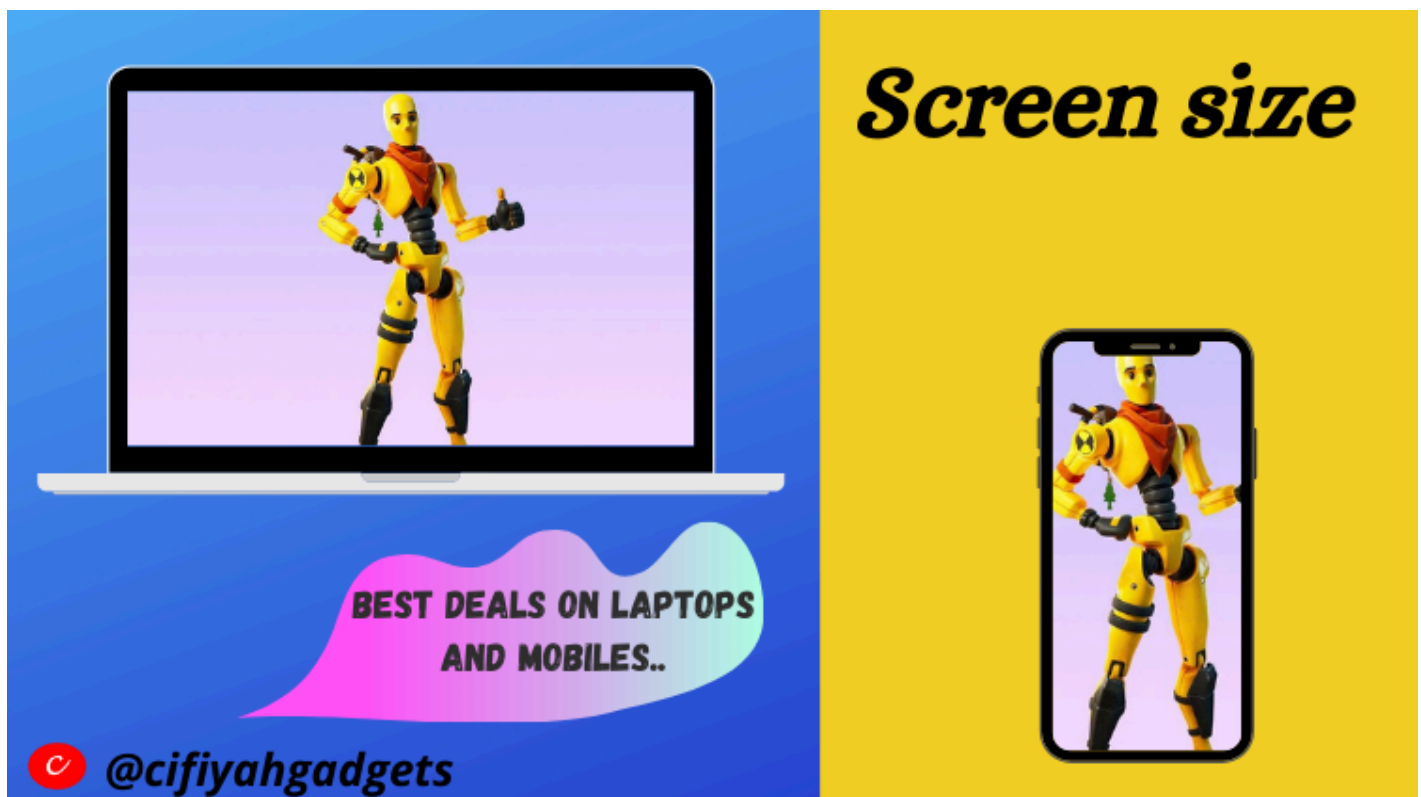

- As the size is small so as the storage capacity of the mobiles are small. Most of the mid-range phones have 32GB to 64 GB storage some of the high-end phones which are priced more than 1 lac have high storage capacity upto 512GB.
- The laptop basic storage capacity is 256GB which is high enough than a mobile. As you move to high end laptops you will get storage capacity upto 2TB.
- Connecting external hard drives and transferring files from them are very easy with laptops but not every mobile support the OTG connectivity.

Applications

- As the mobile are very portable so it can be used anywhere. Applications are more useful in the mobiles making payments, ordering food, getting directions, and many more.
- The applications like making payments in a shop cannot done in a laptop.
- Some heavy applications like MS office, Video editing apps are done in laptops.

Gaming

- When it comes to gamming you need a keyboard and a mouse or a gamepad which can be connected in a laptop.
- Mobile games are just for stress relief or for fun as serious gaming cannot be done with touch screens.
- Serious gaming needs precision, accuracy and skill and for these the gamers need keyboards and mouse.
- Also, the high-end games do not have mobile version of it as they have many controls which cannot be managed with just touch screen input.
