

# How does Intelligent Transportation System (ITS) works with emerging Economy?

Transportation authority's face a big issue in deploying ITS technology due to a lack of financing for ITS initiatives. Several countries throughout the world, even industrialised ones, are prioritising the growth and upkeep of transportation networks above the deployment of modern ITS systems. Both established and emerging economies have struggled with the economic recession in recent years.

Transportation information is shared between vehicle and road users, transportation authorities, and traffic control units via information and communication technologies (ICTs). The architectural implementation of an [Intelligent Transportation Systems \(ITS\)](#) is confronting interoperability problems in order to share information and improve transportation efficiency. Due to differences in toll collecting ideas and technology utilised by highway toll collection operators, interoperability is a key concern for electronic toll collection systems (ETC).
