

## Can laptops be replaced with desktop?

Neither the [laptops](#) can replace desktops, nor the desktop can replace the **laptops**. The Laptops will always perform less than a desktop. The laptops are also better in many ways. In a desktop you will need a desktop external mouse, keyboard and monitor but these are the components of PC anyways and the whole is said as desktop.

It is true that the performance deliver of the desktop is high than any other form of **computer**, but with the advancement of technology the [latest gadgets](#) are preferred more than the old ones. The major problem is with the size of the desktop. To carry it from one place to another it is very difficult and waste on time and practically carrying it is impossible.

### Some factors in which Laptops are better than Desktops

It a small size computer with full loaded tech that easily fits in a bag pack. For the size of the laptop is most used by the people and it also easily available. With the compact size it's very easy to carry it to your workplaces. Some factors in which laptops are better than desktops are: -

- Laptops are small and is very easy to carry it to your workplace.
- Laptops have their own battery backup so you can work for hours without a power cable attached to it.

- You can also work while travelling with the battery backup for hours.

## Some factors in which Desktops are better than laptops

With the big size it also provides huge performance and can run heavy load applications with ease. Gaming is best with desktop not with laptops. Many people who work on heavy load applications and they do not need to carry them anywhere they prefer desktops. Some factors in which laptops are better than desktops are: -

- Desktops are faster than laptops and deliver better performance
- Desktops are customisable and you can build your own CPU.
- Gamers mainly focus on desktop as in laptop high level gaming cannot be done.

## Main problem with laptops?

Foremost laptop you are still with the same specs and you are stuck with it unless and until you buy a new model laptop. Where upgrading a desktop is a piece of cake and you install the upgradations parts by your own.

- For example, if the applications you run eats up all your RAM memory then you can easily upgrade the ram as you have extra slots in the mother board to upgrade in a desktop. But every laptop does not have extra slot for ram upgradation.
- Say for graphics card also if your budget is tight then you can keep aside the graphics card to install it later according to you as there will be proper slot for graphics card but in **laptop** if you are buying it without graphics card then you can really add a graphics card to it.
- You can add a several number of storage devices in a desktop but in laptop you can just add 1 storage device that to some **laptops** do not have space for HDD.
- Cooling is also a great issue in **laptops** due to lack of space company cannot provide more fans for cooling. But I desktop you can insert high end coolers like liquid cooler.

## Who should buy laptops?

[Laptops](#) can be a great replacement for desktop if you are not opting for that level of performance. Those who need to carry a computer to their workplace laptop will be any day a better choice for them. Like the IT companies need to work with their laptop and in a bad they carry it easily.
