Post Trading Analytics

What is Post Trade Analysis?

Post Trading Analytics includes studying and journaling what went right and what went wrong as per your plan. AnaStrat's **Best Post Trading Analytics Platform** is one of many other sophisticated features on the platform that helps you save a lot of hours and ease your experience.

- *If your assumptions were right to what extent did they contribute to the success of the trade execution?*
- *What other unconsidered factors contributed to the success of the trade execution?*
- *If your trade went wrong what factors influenced the disturbance in your plan?*
- *Why did you not consider all the factors that could possibly influence the price action?*
- *How accurately did you plan your trade?*
- *How accurate are your predictions with respect to target and stop loss?*
- *Which sectors are your predictions better?*
- *Which sectors are your predictions worse?*
- *Which strategy/indicators/patterns give you better accuracy?*

- *What times of the day your trade accuracy is better?*
- *What days of the week your trade accuracy is better?*
- *How many long calls did you make?*
- *How many short calls did you make?*
- *How many of your calls were booked profitable?*
- *How many of your calls were booked on loss?*
- *What is your return on the investment?*

What is the total span on individual trades to get that ROI?
