How does it work?

Domperidone 10 mg is a medicine that increases the movements or contractions of the stomach and bowel. It is also used to treat nausea and vomiting caused by other drugs. It is sometimes used together with other medicines to treat stomach ulcers. Domperidone

(Motilium) is also used to treat bloating, nausea, and other stomach discomfort caused by too much acid in the stomach (gastroesophageal reflux disease).

It works on the region in the brain that controls vomiting. It also acts on the upper digestive tract to increase the movement of the stomach and intestines, allowing food to move more easily through the stomach.

What are its uses?

Motilium is a drug used to treat nausea and vomiting. It is also used to treat stomach disorders such as dyspepsia and gastroesophageal reflux disease (GERD). This includes,

Nausea

Vomiting

Indigestion

How to use?

Follow all directions on your prescription label. Do not take this medicine in larger or smaller amounts or for longer than recommended. Take this medicine with a full glass of water.

Motilium can be taken with or without food. To treat nausea and vomiting: Take this medicine by mouth with or without food as directed by your doctor, usually 3 to 4 times daily.

To treat stomach disorders: Take this medicine by mouth with food as directed by your doctor, usually 3 times daily. If you take this medicine for longer than 12 weeks, your doctor may want to check your heart rate and blood pressure on a regular basis. Do not crush, chew, or break an extended-release tablet. Swallow it whole. Breaking the tablet may cause too much of the drug to be released at one time.

Brand name?

Domperidone 10 mg is the generic name and the brand name is Motilium M 10 mg.

How long it will effect?

Domperidone 10 mg is usually given for only a short time, not more than 12 weeks. Call your doctor if your symptoms do not improve, or if they get worse while using Motilium. Store at room temperature away from moisture and heat. Throw away any unused medicine after the expiration date on the label has passed.

Effect of Motilium on pregnancy?

Motilium should not be used during pregnancy unless the potential benefit justifies the potential risk to the fetus. It is not known if Motilium is excreted in human milk. Because many drugs are excreted in human milk and because of the potential for serious adverse reactions in nursing infants from Motilium, a decision should be made whether to discontinue nursing or to discontinue the drug, taking into account the importance of the drug to the mother.

Overdosage Signs and symptoms of overdose as a result of the use of more than the recommended dose during the therapy include somnolence, dizziness, and extrapyramidal

reactions. Serum prolactin levels are generally elevated in patients receiving domperidone. In case of overdosage, discontinue Motilium and initiate supportive and symptomatic treatment. Domperidone is highly metabolized, and the excretion of unchanged drugs in urine is a minor route of elimination.

Motilium – Clinical Pharmacology When to take it?

Motilium is usually taken 3–4 times a day. You can take Motilium with or without food.

If you forget to take it?

If it is almost time for your next dose, skip the dose you missed and take your next dose when you are meant to. Otherwise, take it as soon as you remember, and then go back to taking it as you would normally. Do not take a double dose to make up for the dose that you missed. If you are not sure what to do, ask your doctor or pharmacist. If you have trouble remembering to take your medicine, ask your pharmacist for some hints.
