

# Features of Cisco Catalyst Switches

Cisco Catalyst switches simplify operations while optimizing functionality by bringing wired and wireless together. Below are some primary features describing why Cisco Catalyst switches can prove advantageous to you and your business requirements:

## 1. Reliability

Cisco Catalyst switches make it easy to manage wired as well as wireless networks, all while strengthening security & simplifying campus LAN.

## 1. Efficient Scalability

Access switches enable you to structure an automated, digital-ready network.

## 1. Safety & Security

The integrated network security in the event of an unmitigated attack is a valuable addition to your business.

Below are some features of different series of Cisco Catalyst switches.

## 1. Cisco Catalyst 9200 Series Switches

- Optional stacking, Layers 2 and 3, up to 160 Gbps
- Up to 48 ports full Perpetual PoE+ and multigigabit
- 1G; 10G/25G/40G uplinks
- Entry level for intent-based networking

## 1. Cisco Catalyst 9300 Series Switches

- Stackable, Layers 2 and 3, up to 1 Tbps
- PoE, PoE+, UPOE, UPOE+, Cisco StackPower
- 25G/10G fiber, 1G/2.5G/5G/10G multigigabit; multigigabit/25G/40G/100G uplinks

## 1. Cisco Catalyst 9400 Series Switches

- Modular, Layers 2 and 3, up to 9 Tbps
- Cisco Multigigabit Technology, SFP/SFP+
- PoE, PoE+, UPOE, UPOE+
- Designed for Cisco DNA and Cisco SD-Access

## 1. Cisco Catalyst 1000 Series Switches

- Fanless design
- Data, PoE, or PoE+, 2 SFP uplinks
- Extended temperature range
- Managed with web UI or CLI

## 1. Cisco Catalyst PON Series

- 1G data, POTS, CATV, Wi-Fi, and PoE+
- Redundant fans and power supply
- Managed with CLI or free Cisco Catalyst PON Manager
