

CRP Test

CRP test refers to the measurement of C-reactive protein (CRP) levels in the blood.

During these inflammatory conditions, C-reactive protein (CRP Test) levels can experience rapid and substantial increases, rendering it a valuable marker for evaluating and tracking various medical conditions.

Healthcare professionals commonly conduct C-reactive protein (CRP) testing using a blood sample.

There are different methods available for CRP measurement, including high-sensitivity CRP (hs-CRP) tests, which can detect even lower levels of CRP associated with cardiovascular risk. C-reactive protein testing is primarily used in the following ways:
