

## How to fix a Coinbase login error in the Coinbase App?

To get the Coinbase login error fixed, you may need to reset your mobile device. If this does not help you get it fixed, then you should try changing security settings in your Coinbase login account. For instance, turn on your text message instead of an authenticator app. In the same way, try to change different settings in your app.

## What should you be blocked from accessing your Coinbase login account?

There are a few tricks you can use to get your Coinbase login account back in action once you have been locked out. These methods are identical to the ones you have seen while signing up for your Coinbase login account. You will need your [Coinbase login](#) ID and password. In case, you have lost or forgot your email ID, password, or both, please contact Coinbase login helpline number to get technical assistance on how to regain your login credentials.

But if you have your login ID and password, then enter them in the Coinbase login page. You will be required to complete the two-way verification process. Later, you will have to verify your identity to ensure that it is you trying to sign in. The usual period for account recovery is 48 hours but depending on the internet connectivity, it might take a few more hours. Once the verification is complete, you will be able to sign in to your Coinbase login account. After 48 hours, your account will be restored to its full trading capabilities.

## What is an error 0 message?

Sometimes, you might face other problems while trying to recover your Coinbase login account. Error 0 is one of those problems. This error may appear when you try to sign in to your Coinbase app using a new Apple device. This error is very rare and weird because the majority of iPhone users can easily access their Coinbase login account. But when they log

out of their Coinbase login account and try to log in again, they start to get an error 0 message.

## **What does this message mean?**

This message simply indicates that a task or operation is yet to be completed and running in the background. Most of the time, it has something to do with the security system of the application. This error simply prevents all new devices to access your [Coinbase login](#) account. But the weird part of it is that when you try to log in to your account using the web browser of your iPhone device, you will get into it without any trouble. This is weird.

## **How to get rid of the error 0 message?**

To fix this error, try to reset your iPhone device or change the security settings on your iPhone. You might get through the error in no time. However, this might be the best way to get rid of error 0 because this error keeps coming back every time you try to log in to your Coinbase account. Even Coinbase has maintained silence about this error message so far.
