

# Hand Sanitizer Dispensers - Conveniently Cleans Your Hands

A good way to keep germs at bay is to invest in a hand sanitizer dispenser. These come in quite a few different shapes, sizes, and colors. You can find touch-less, freestanding, wall-mountable, foaming, and tabletop varieties for any room in your home or office.

These are all very affordable, especially when you take into account the money you are saving in the long run. The less exposure you have to germs, the less you will get sick. In the family setting, this means less money for doctor visit co-pays and prescription medications. In the business setting, this means less work missed by employees and lower health insurance rates. Whatever your needs, this small investment will pay for itself over and over again.

Back to business though, we will now talk about the wall-mounted hand sanitizer dispenser. These are commonly found in public bathrooms. They will have a push pad at the bottom or top of the unit and when pressed, liquid or foam is dispensed into your palm.

Another wall mount offers a touchless or touch-free feature. This battery-operated model incorporates sensors. When a palm is positioned under the unit, the sanitizing liquid (most often foam or gel) is automatically dropped into the palm. These units are mounted with a strong double-sided adhesive or, as an alternative, four screws. For those that do not want to go to the extent of mounting something to the wall, you have the option of a freestanding unit. This works in the same fashion as the wall mount, in that you can have user-operated or automatic and you have the choice of foam, liquid, or gel. You simply place the upright unit where desired; no attachment to anything is needed.

A Hand Sanitizer Dispenser, when used properly, reduces the transmission of cold-causing germs by 99.9%. To use this properly, be sure the amount dispensed is about the size of a quarter. Thoroughly rub your hands together for approximately thirty seconds, making sure every area has been covered in the substance. Do not rinse or wipe your hands. The sanitizing liquid will dry on its own within a very short period of time. If you follow these simple steps, you will be on your way to a more germ-free life!

As the leading **Surgical Products Supplier Company** based in Ahmedabad, We are the Leading [Automatic Hand Sanitizer Dispenser](#) Manufacturer, Suppliers And Exporters in India this is an ultra-sanitary sanitizer dispenser. this is 100% Safe and Easy to use Ideal for Offices,

Hospitals, Hotels, Banks, Bars, schools, colleges, Restaurants, Airports, Malls, Factories, Gym and many more. For any queries & inquiries, please Call **+91-8866494594**
