

# Prefabricated Steel Structures

Over the years, the construction industry has experienced a lot of developments. Today, concrete and wood are not the only major materials that can be used in construction. More and more people are now moving towards metals and alloys such as steel, for their construction projects. Chances are you might have heard about prefabricated buildings or [prefabricated steel structures](#), but you don't exactly know what they are or why they're equally a good choice for your project.
