

It's High Time to Upgrade Your AX 2012 to Microsoft Dynamics 365 Finance and Operations

Today, almost all businesses leverage technology to surpass one another. When technology comes with exceptional benefits, it makes the competition harder. Hence, the one with the latest technology is most likely to win. As Microsoft mainstream support for 2012 ended in October 2021, businesses must [Upgrade AX to D365](#). Nevertheless, this is not the only reason to upgrade.

In the era where the cloud rules, businesses running on on-premises technology will fall behind. In addition, Microsoft has stopped its AX 2012 upgrades, which means your services will become more and more irrelevant with time.

Some major drawbacks businesses already witness include:

- [Microsoft Dynamics AX](#) is not a good choice for small-scale businesses. It majorly supports midsize to large-scale businesses.
- Even Though this solution is very flexible and can be customized according to certain market needs, the dependency on ISV and partner channels can heavily cut your ROI.
- You cannot get enough [Cloud ERP](#) and SaaS options if you run this software on-premises.

Upgrade AX to D365 to Get Exceptional Services

Given below are the top outstanding services you will get after [D365 Migration](#):

Web-and-cloud Based Solutions

One of the major factors promoting [AX to D365 Upgrade](#) is its infrastructure. On one side, D365 AX is an on-premises version, which means the business will have to host it on a privately owned server. And on the other hand, [Dynamics 365 for Finance and Operations](#) is a cloud-based solution that runs by and on [Microsoft Azure](#). The fact that cloud-based solutions are entitled to more advanced, agile, and flexible solutions makes the difference. Your business needs to become agile and flexible with suitable tools to thrive in this ever-changing market.

One of the greatest benefits of cloud-based solutions is that you do not have to manage the entire ecosystem yourself. Your service provider is responsible for all your upgrades and updates. [AX to D365 Finance and Operations Upgrade](#) will support your software on any browser and OS wherever you want.

Consistent Upgrades

[Upgrade AX to D365](#) to get a consistent iterative list of upgrades. The best part is you can install or disable whatever feature you like. You can even pause three upgrades in a row with no fuss. Make your software feature-rich and powerful, and access only the tools you need. Not to mention, this will also save your IT team a bulk of their time.

Since the updates are automatic, your IT team doesn't have to engage there. Assign them other development projects that count. [AX to D365 Finance and Supply Chain Management Upgrade](#) ensures you are on the most up-to-date technology.

Extensively Innovative Tools

If you [Upgrade AX to D365 Finance and Operations](#), you can tap into a plethora of different tools and features designed for different industries. Microsoft is said to have 3700 vertical solutions crafted for different industries. Associated features include human resource management, manufacturing management, purchasing management, inventory management, sales management, quality management, and product technology.

Combining all these features on the same platform presents [Microsoft Dynamics 365 for Finance and Operations](#): an [ERP solution](#) that supports every business type, size, and industry.

Intuitive Interface

One of the most noticeable differences between [Dynamics AX](#) and [Dynamics F&O](#) is their user interface. AX has a standard user interface that can only be used via desktops. Dynamics AX, however, has a friendly user interface and can be used via different browsers, and mobile devices which encourage remote work and support anywhere access.

Additionally, after the [AX to Dynamics 365 Finance and Operations](#) upgrade, the user can access workspaces where they can create custom queues and links to get them through day-to-day tasks.

On-demand Scalability

[Upgrade AX to D365](#) and get scaling capabilities whenever and wherever you need them. In contrast to Dynamics AX where scalability was a big concern, [Dynamics 365 Finance and Operations](#) gives you the flexibility you need in a growing business. Furthermore, it is excellent to support your business in a rapidly changing environment.

You don't even have to make a single upfront investment; you can pay in monthly subscriptions too. You can initially get the very minimum service package and increase resources as per need.

If you are looking forward to [**Upgrade AX to D365**](#), you must get a suitable partner first. It is suggested to choose from a [**Microsoft Dynamics 365 Gold Implementation Partner**](#). It's perfect if they are old enough in the market, such as Trident Information Systems. We are a [**Microsoft Dynamics 365 Gold Implementation Partner**](#) and [**LS Central Diamond Implementation Partner**](#). With a robust track of accomplishments, we have gathered impressive clientage and helped them thrive in the market. If you want to add yourself to the list, [**Contact Us**](#).
