

Brazil INMETRO Approved Type N Plug 10A 250V 3-Pin Power Cord

Introduction to ZH-72A Power Plug

There are two variants of the [Type N ZH-72A power plug](#), one rated at 10 amps and the other rated at 20 amps. The 10 amp version has two 4mm thick round pins and a ground pin. The 20-amp version for heavier appliances has two 4.8mm diameter round pins and a ground pin. Type N sockets can also be used with Type C plugs. The design of the N-type socket deliberately considers the compatibility with the C-type plug, so the socket is specially set with a hexagonal recess that fits the contour of the C-type plug.

Thanks to the recent emergence of injection molding technology, the [N-type ZH-72A power plug](#) and socket is more compact and stronger than other earlier born plugs and sockets, and it is one of the safest power supply standards in the world.

Brazil is one of the few countries that uses both voltages. While most states use 127 V, some use 220 V. Therefore, it is very important to find out the local voltage before plugging in your device (note: wrong voltage may damage your device). Many appliances sold in Brazil are dual voltage.
