What are the best flagship phones in 2020?

Flagship phones are the latest and the greatest model from the brand, it's the latest launched phone that is the most powerful one.

This year many latest features are being introduced to the smartphones let be it the 5G supported or the new Lidar Scanner in the iPhone 12 and it also comes with a strong ceramic shield. And the eye-catching galaxy note 20 ultra. There are a lot of it let us see each of them in detail.

Samsung galaxy note 20 ultra 5G

Samsung has given full efforts to give the best to the public with Samsung galaxy note 20 ultra 5G. The lasts in the note series is the superb display that always Samsung does, the battery, and a superb triple camera set up.
The Exynos version performance is not up to the mark and being a flagship model charging is not competitive with other flagship models. And 144Hz refresh rate screen cannot be enabled with high resolution. So overall there are pros and cons like: -
Pros

- The best display on the market.
- Great battery optimization.

- S pen increases productivity.

Cons

- The rear camera bump doesn't fit the design
- Exynos lacks performance.
- Charging speed is not good compared to others in the segment

Apple iPhone 12 pro max

It is the latest launch from apple this year and is power by the most powerful A14 bionic chip. A new lidar scanner is being introduced for better depth sensing of photos. And it is the first 5G phone from apple.

Although the latest iPhone still cannot give more than 60fps which is sad. The bezels are thinner but still, the huge notch is still there. And guess what's in the box? The iPhone of course and only a charging cable the charger and the earphones are removed from the box and sold separately.

Pros

- Best iPhone with great design.
- Most powerful chipset in the market.
- Ceramic shield protection.

Cons

- Huge notch.
- Still no high refresh rate is offered.
- Memory still not expandable.
- Charger and headphones vanish from the box.

Xiaomi Mi 10 pro 5G

The latest model of Xiaomi the Mi 10 pro 5G has a camera of 108 megapixels which is the highest in a phone. It has a 5x zoom with a quad-camera setup. The Screen refresh rate is held at 90hz for Battery optimization. And in the box comes a 65W fast charging adapter which juices it up very fast.

Pros

- Supper bright 90hz AMOLED display.
- 65W fast charging.
- Best speakers.

- Quad camera setup with 108MP.

Cons

- No IP certifications.
- No memory expansion.
- Front camera does not match the standard of the front camera.

Oneplus 8 pro 5G

The price of this model is ait high than the other models of oneplus the **flagship killer** approach is no more, and this comes with an IP68 rating and wireless charging.

It also comes with a 144hz refresh rate also at 1440p resolution and comes with a great camera. Overall, it's a great phone from oneplus with 5G enabled.

Pros

- Great refresh rate of 144hz with 1440p resolution.
- Great camera.
- Super-fast wireless charging.
- Loud stereo speakers.

Cons

- No memory expansion.
- No always-on display.

Asus zenfone 7 pro

The front and back camera is the same as the flip camera mechanism, it is not just for design it makes the best selfie camera in the market as it the read camera of the phone as well and is very powerful.

It's a quite heavy and big phone and for the flip mechanism it doesn't have any IP certifications. And don't have an in-display fingerprint a side fingerprint scanner is provided.

Pros

- Best selfie camera with flip camera mechanism.
- A powerful chipset the Snapdragon 865+.

Cons

- Heavy and thick.
- No IP68 rating.

- No in-display fingerprint scanner.

All these phones are priced a bit high and not everyone can afford them so they can go for **second-hand phones** that are available at a low price and you can get it from classified sites.
