

The MRCP Part 1 Exam

What is the MRCP Part 1?

A candidate's comprehension and knowledge of clinical sciences pertinent to medical practice and major disorders are assessed on the [MRCP\(UK\)](#) Part 1 exam to determine whether they are at a level suitable for admission to specialised training. This knowledge is essential for learning during postgraduate training to develop illness comprehension and treatment, as well as serving as a key foundation for clinical reasoning. Physicians who have worked as active physicians for at least a year are eligible to take the exam. It is a tool for determining if applicants have the medical knowledge required to proceed to the next stage of their training. Candidates must demonstrate a thorough mastery of each topic covered in the exam, which covers a wide range of subjects. While prior experience is required, candidates must also demonstrate that their comprehension of medical science has grown since graduating.

What are the differences between MRCP Part 1 & 2?

Numerous internal medicine-related topics are included in the [MRCP Part 1 exam](#), including infectious diseases, cardiology, gastroenterology, and haematology. Exam results are evaluated based on a candidate's understanding of clinical sciences pertinent to medicine and common or serious conditions at a level suitable for admission to advanced specialty training. Internal medicine-related topics included in the MRCP Part 2 exam are more extensive and

include clinical skills like communication and history-taking in addition to management, ethical, and legal topics.

Level of Difficulty: The MRCP Part 1 exam is regarded as a knowledge-based test that evaluates a candidate's capacity to remember and utilise internal medicine-related facts and concepts. In general, people believe it to be easier than the [MRCP Part 2 exam](#). The purpose of the MRCP Part 2 test is to evaluate a candidate's capacity to integrate and apply information to complicated clinical scenarios. It is thought to be more difficult than the Part 1 exam.

Pictures: The MRCP Part 2 test includes multiple photos in both exams, whereas the MRCP 1 exam only consists of text-based questions.

Overall, although being written tests that evaluate a physician's knowledge of internal medicine, the MRCP Part 1 and Part 2 differ significantly in terms of format, content, and difficulty. To succeed in their internal medicine jobs and adequately prepare for every exam, doctors must be aware of these distinctions.
