

## Washing methods in carpet washing in different modes

Shining the [carpet is one of the goals of washing](#) it, which leads to more beauty and the visibility of its pattern with full clarity. An item that all the owners of machine and handwoven carpets want to achieve. But how to achieve this goal? And what is the final and successful solution for electrifying the carpet. Stay with us in the following article to deal with this issue.

### **Combination cleaning**

Dirty carpets that need deep washing are used. This method includes two main steps. First, the carpet is washed using suitable detergents to remove dirt and stains from the carpet. Then, using carpet cleaning machines, excess water and detergents are removed from the carpet. This method is highly effective in removing dirt and improving color strength and leads to deep and complete washing of carpets. Due to the double step and the use of mild detergents, the carpet looks fresher and cleaner after this wash.

### **Dry cleaning**

- This method is suitable for water-sensitive or older carpets with fixed colors.

Dry cleaning is a carpet cleaning method that is done without or with a very small amount of water. In this method, drying chemicals are used instead of water. The carpet or clothing absorbs the drying chemicals and removes dirt and stains from the surface of the product. Then, using special devices, chemicals and pollution particles are removed from the carpet. One of the advantages of this method is faster drying and not creating too much moisture in the environment.

### **Low Moisture Cleaning**

It is a carpet cleaning method that uses a limited amount of water and is suitable for carpets with a sticky texture, such as carpets. In this method, special detergents are applied to the area of the carpet along with water. Then, the carpet is cleaned using special devices. One of the advantages of this method is that it consumes less water than traditional methods and the carpet dries quickly. This can increase its size and durability. Also, this method is especially suitable for regular washing and maintaining the cleanliness of carpets.

### **Steam Cleaning**

It uses steam for cleaning. In this method, a special device with the power to produce water vapor is applied to the carpet or flooring. Water vapor enters different parts of the carpet and loosens dirt, stains, and contaminated materials. Then, a special absorption and drying unit is passed over the carpet to remove steam and water from it. This method is known as an effective way to remove dirt and restore the freshness and beauty of carpets, and it is usually considered as one of the cooling methods of washing, because it allows the carpet to dry quickly and prevents the problem of permanent moisture in them.

### **Hand washing**

This method is mostly used for old, valuable, or washing-sensitive carpets. In this process, the carpets are carefully transferred to surfaces that are prepared for washing. Then, they use mild detergents and manual techniques to wash the carpet. This process involves washing, removing stains and dirt, and then thoroughly drying the carpet. Hand washing requires professional attention to many details and characteristics of the carpet to ensure the possibility of damage to the carpet and the removal of contamination in the best way.

It is recommended that you consult with [Shahab carpet cleaning](#) experts before choosing a washing method for your carpet. They can recommend the best method based on the carpet's type, age, and soiling conditions. Also, always use skilled professionals and reputable carpet cleaners to perform these tasks to ensure the quality and preservation of your carpets.
