The scale analogy metaphor is used to demonstrate how increasing exercise levels can help a person who has a high weight on the scale burn fat. They can achieve this by increasing the intensity of their exercise sessions or by adhering to a nutrition plan to ensure they are consuming enough energy to keep them active, but they cannot simply increase the weight on their scale. For example, a person who weighs 150 pounds and works out three times per week will lose 5 pounds per week as long as they stick to diet and exercise plans that will allow them to maintain their weight loss without losing muscle mass. They do not "

Conclusion: Fat loss and weight loss are two sides of the same coin.
