

# TEETHING BABY- FACTS, SYMPTOMS, AND REMEDIES

[One joy of parenthood is watching your little ones reach milestones and the eruption of your baby's first tooth is an exciting milestone. Teething usually starts between 6 and 8 months of age, but in some babies, it starts much later. Babies usually have their complete set of 20 milk teeth by their 3rd birthday. If your baby doesn't have any teeth by 18 months, then it may be due to some underlying medical cause like vitamin deficiency, malnutrition, or underactive thyroid. It's time to see a doctor for evaluation.](#)
