

Have any problems using the office chairs? Most of the time the problem can be solved many times by selecting the correct chair which suits your body type. these issues can be corrected. you have to follow the advice of the manufacturers on the usage and maintenance of the chair. And also make sure about your floor in which the castors function depends on the soft surface Most commonly occurred problems with offices or Hospital furniture in Kerala are:

1. The cushion on the seat:

Always it would not be up to your expectations. When you bought the chair you feel very comfortable in the [seatings](#). But later on, you are not getting as much comfort as before. This is because your seat cushion pishes instantly as you sit daily for long hours. It can lose its capacity of comfortness due to over usage, then the best way to get rid of this problem is to shift to a new style of chair. then, later on, you can keep the ones that are useful and comfortable giving in the long run. you can buy a chair type which is made for the usage of long hours. This method can solve the problem of seating.

When you go for a [purchase](#) you can make sure of the quality of the chair by the seats. Just check your seats sitting on it and getting up. If you find that the seat comes up with you when you stand and goes down when you sit. Then these seats are more likely to make a problem later.

2.

Castors

Just think about having wheel bags in a country like India, imagine the roads, you find people carrying their wheel bags on their heads.

Then what is the use of this feature, the same way an office chair's castors will function properly where there is smooth flooring? [Chair manufacturers](#) always suggest using chair mats for smooth rolling and long-lasting. If you don't use chair mats it can make damage to your floor as well as your carpets. making small holes with the castor edges. You can also change your castors separately fit for hard floors(rubberized wheels)
