

Full Blood Count Test

One of the most often performed blood tests in the laboratory is the complete blood count (CBC), sometimes referred to as a full blood count (FBC) test. Hemoglobin, red blood cells, white blood cells, and platelets are all counted in the blood. Blood abnormalities such as anemia, leukocytosis, thrombocytosis, and lymphocytosis may all be found with CBCs. Please contact, Afriglobal Medicare to book a [full blood count test](#) at a reasonable price. You may read our blog for further details.
