

Why moving to multi-factor authentication is crucial for security

WHY MOVING TO MULTI-FACTOR AUTHENTICATION IS CRUCIAL FOR SECURITY

Multi-factor authentication gives users access to their accounts by looking at patterns such as geolocation and the type of system used to log in.

These measures facilitate a safe space in which we can hold data with a greater degree of security.

63%

of enterprise organisations use MFA in comparison to only 38% of small and medium organisations.

Many employees will look at working remotely in the future as more companies open their doors to work-from-home because of COVID-19.

[Multi-factor authentication](#) is your simplest basic security option against most cybersecurity threats out there.
