

How Often Should You Replace Your Furnace Air Filter?

Replacing furnace air filters is an essential part of furnace maintenance. However, it can be challenging to determine how often you should replace your filter. This blog post will discuss the best way to determine when to replace your filter and some tips on extending your furnace filters life. So read on and be informed!

The types of furnace air filters

Several types of [best furnace air filters in Ottawa](#) are available on the market, each with its benefits and drawbacks. Here is a quick overview of some popular options::

- **Fiberglass air filters** are the most affordable option, but we must replace them more frequently than other types.
- **Pleated air filters** are more expensive, but they last longer and are more effective at trapping dust and other particles.
- **HEPA air filters** are the most expensive option but are also the most effective at trapping pollutants and allergens.

If you're unsure which type of furnace air filter is right for your home, it's a good idea to speak to a professional. Furnace technicians for furnace air filters in Ottawa can help you choose the right type of filter for your furnace and your home.

How often should you replace your furnace's air filter?

If you live in Ottawa, you know the winters can be pretty cold. It is essential to change your furnace air filter regularly to ensure your furnace is working correctly and efficiently. Depending on your filter type, you may need to change it every few months or yearly. The frequency with which you need to change your filter also depends on the amount of dust, pet hair, and other debris in your home. If you have a lot of foot traffic in your home, you may need to change your filter more often.

Tips for keeping your furnace running efficiently

1. Change your furnace air filters regularly. A clean air filter will help your furnace run more efficiently and prolong its life.
2. Choose the correct type of air filter for your furnace. The type of filter you need will depend on the kind of furnace you have.
3. Make sure the furnace air filters are the correct size. You'll need to ensure you get the right size for your furnace.
4. Check the air filter regularly and change it when it's dirty. If you don't clean your air filter regularly, it might not work as well. This can make your furnace work harder and reduce its efficiency.

5. Clean or replace your furnace air filter at least once a year. Depending on your furnace type, you may need to do this more often.

These tips will help keep your furnace running efficiently and prolong its life.
