

Comprehensive Review Of Cellphone Plans Of Boost Mobile

If you are looking for a prepaid phone plan that comes with a manageable (read low) monthly bill and some usable data, then Boost Mobile might just be the ideal carrier for you. You will also get some nice additions, such as HD video streaming and unrestricted music streaming (till you are using Boost's music partners). Having said that, you also need to know that Boost Mobile is a Sprint-network service that comes with a limited BYOD (Bring Your Own Device) program plan. In this article, we are going to provide you a comprehensive review of Boost Mobile so that you know what you are committing yourself into when you [buy boost mobile in Maryland](#) or any other state for that matter.

The pricing of Boost Mobile's is just standard for the prepaid industry. However, when it comes to the price for which it offers 3 GB of data, the plan pricing is at par with the rival companies. Talking about the real service details of Boost Mobile, it is kind of a mixed bag. If you are someone who likes to travel around the country quite frequently and you are required to use your smartphone as a Wi-Fi hotspot at the airport, then Boost can be a great choice. It allows much more hotspot data to be used than most of its competitors, and here, even some of the major brands can also be included. When you buy boost mobile in Maryland, you won't get international roaming, however, you can get international coverage for countries like Mexico and Canada, in addition to international texting, by using an add-on plan.

On the other side, Boost Mobile's "Unlimited Gigs" plan has some restrictions over music streaming as well as gaming. Its unlimited plans restrict music speeds to 500 Kbps and games can be streamed in the speed of up to 2 Mbps. You may not really notice any difference while streaming most of the time, but the speed can be slowed during peak hours.

All the major Boost Mobile plans will allow you to have unlimited music streaming. This basically means that irrespective of how many hours you spend listening to a particular playlist on Spotify, that won't be counted towards data usage. That is excellent especially when you have the 3 GB plan and you stream music very often. Boost's unlimited music deal lets you use the high-speed data on other things, such as GPS navigation.
