

Surgical Lasers Market: Global Industry Analysis and Forecast 2023 – 2029

The Surgical Lasers Market is expected to grow at a significant growth rate, and the analysis period is 2022-2028, considering the base year as 2021.

A laser is an optical amplifier that uses stimulated emission of electromagnetic radiation to emit light. As an alternative to open surgery, lasers are used to cure leaking blood vessels and remove damaged tissue. To eliminate a damaged cell, a laser beam is trained on it, heating it to the point of destruction without affecting the surrounding healthy cells. Different laser beams are used for various purposes, and their wavelengths vary accordingly. The target tissue and the intended surgical procedure determine the laser beam's wavelength. Surgical laser products have several applications in laser surgery, including the removal of moles and tattoos, the destruction of lesions and tumors, the sealing of lymph arteries, and the closure of blood vessels and nerve endings. They find application in a wide range of medical specialties, including oncology, ophthalmology, urology, and cardiology, and in procedures as diverse as laparoscopic, percutaneous, and open surgery.
