

Enjoy better in life through smart TV box

People are investing in buying smart TV boxes. But some of the folks still have doubts about like does the picture and sound quality match with the standards set so high by the television manufacturing industry. The smart TV box is getting better and better.

Smart technology

This Android TV box is based on disruptive technology where technology comes along and

disrupts all the other technologies and satellites nearby challenging the whole universe. This internet-run TV box is no more a blunder when a person use to flick with 50 channels with nothing meaningful on. However, today's scenario is quite different where a person can get access to his world of music or a movie with a click of a single button. With broadband getting better and better, the world of entertainment can be at every house.

Tips and tricks

Now, as we know the best qualities of an android TV box over normal television, we are a little inclined to the idea of buying a [smart TV box](#). At this point, we would like to tell you several brands are into android TV box manufacturing. So, to narrow down the research, we have curated some of the ideal steps to make things easier at your end:

Research: This should be on top of your list, skimming through product reviews. But there is catch thou. Some of these product reviews could be handled by the marketing team so could be less genuine. So, instead, you can log in to forums and web blogs and talk to actual people about their experiences and gather as much information as possible. Try asking questions about resolution, ports, wifi connectivity, OS versions, picture quality, stereo effect etc.

Resolution: You must have come across some android TV boxes which are dirt-cheap and some whose prices are sky-high. The reason being some of the cheap and affordable internet TV boxes do not provide HD quality resolution i.e. HDMI. The older versions of these TV boxes offer 720p which does not allow smooth buffering. So, to watch HD quality streaming, you need a good and fast wifi connection and also an Android TV box that offers 1080p.

Operating system (OS): You need to make sure that all of your apps will run smoothly on this Android TV box. And if it doesn't then you will face difficulty while installing them on android 5.0 lollipop. This step will save you from spending your valuable time and energy on fixing this issue.

Storage: We are talking of the inevitable RAM that we cannot skip on it. An Android TV box with 2GB RAM is fine. But if you want to download bigger files, you need to make sure that whichever internet TV box you are going to buy, should allow a 64GB micro SD card too.

And once you have completed all of these 4-steps you can buy your dream internet TV box and enjoy your holidays, weekend plans on a bigger screen with better picture quality and no operational issues with OS installations.
