

## Pacific Health System is best home health care agency with Licensed Practical Nurses in Georgia

Pacific Health System is a home health care agency in Georgia which has Licensed Nurses. The agency provides home health care services to the residents of Atlanta and the surrounding areas.

Licensed Nurses provide hands-on care for patients at their homes or in other locations such as hospitals, clinics, and rehabilitation centers. They offer various medical treatments such as dressing wounds, changing bandages, monitoring vital signs, assisting with physical therapy and wound care, and providing other types of assistance to patients who need them.

**As a leading home health care agency, Pacific Health System provides high-quality care with Licensed Practical Nurses.**

**Licensed Practical Nurses** are qualified nurses who have the training and experience to provide skilled nursing care in the patients' homes or other residential settings. They provide treatment, medication administration, and basic patient monitoring.

It is a well-known fact that Licensed Nurses are not allowed to practice medicine. They can only administer medications prescribed by a doctor and provide skilled nursing services under the supervision of a doctor of medicine or osteopathy or a physician assistant under direct supervision. They cannot diagnose any medical condition, issue prescriptions, perform surgery or provide any treatment which is beyond their scope of practice.

### **The quality of home health care agency depends on Licensed Practical Nurses as**

Pacific Health Systems is a licensed [Home health care agency in Georgia](#). With 14 years of experience, it has been providing nursing and therapy services for all ages, from newborn to senior citizens.

Nursing is the heart of any healthcare organization. The more skilled nurses, the better quality of care that can be delivered. Pacific Health Systems has over 90 Licensed Nurses who have the expertise and experience to provide high-quality care.

Licensed Nurses are registered nurses who have received specialized training to work with patients' needs at their homes or other settings not requiring hospitalization. They are qualified to provide nursing care for chronic conditions for people with disabilities or those recovering from surgery or injury, as well as providing family planning counseling, reproductive health services, and medication management.
