

Great course for investors. Understand how to analyze, choose, and manage financial instruments.

Dear investors, If you want to understand how to smooth your portfolio risk, how to choose the right assets ideal for your investment strategy, and define your risks to manage them properly, you can take my [financial instruments](#) course on Udemy, which includes equity valuation, bond valuation, FX, derivatives, risk management, and portfolio management and trading. I also talk about the trading terminal and trading. You will learn how to choose stocks and bonds, forecast currency devaluation, and evaluate derivatives and trade using the trading terminal. Moreover, I will teach you how to combine different financial instruments in your portfolio to get the lowest possible portfolio risk, given your required return. You can also ask me questions if something is unclear during the course. I would be very glad to see you on my course.
