Today's business world regulates and operates on data generation, which makes data crucial for businesses, as it helps them derive actionable insights. Business intelligence [BI] is a

model that helps you transform huge amounts of data into valuable insights that guide you in making informed decisions for your business.

This blog post is meant to underscore the essence of BI in the area of data-based decision-making. We will discuss the practical aspects of BI platforms and how they form the backbone of business institutions' growth.
