

# Top Industrial Paint Manufacturer & Supplier in India

Paint is an important part of equipment maintenance. It does not only impact the outer look of the equipment but also prevents it from any harm. Pigmented fluids or powders that are used to cover and beautify substrates are **industrial paints**. **Zigma Paints (P) Limited** is the top most **manufacturer and supplier of industrial paints**. Our protective paint can stop damage, scratch and corrosion from weakening metal equipment.

[Industrial Paints](#) are thin films deposited on materials to add or enhance some specific properties such as conductivity and wear resistance, etc. This paint is also used in production plants and by qualified applicator shops to coat discrete parts, tanks, wood panels, paper, vessels, trucks, aircraft, piping, metal sheet, and paperboard. With highly-qualified technical engineers on board, excellent labs, our brand promises products of a superior quality that can do benchmarking, testing, and improvements in the plants.

## Types of Industrial Paints

Our Industrial Paints are available in three types of paints

### Zigmatalac - Liquid Paints

Liquid paint is formulated using much different chemistry, and selecting the right one for a given application is a science unto itself. The capacity for simple, on-site colour changes is one of the most significant benefits associated with liquid paint. This type of paint is designed for quick, easy color changes in one booth. They also are more flexible, as colors may be mixed on-site to given specifications. Liquid paints also can be formulated to serve as a primer with special corrosion-inhibiting additives.

### Zigmacoat - Powder coatings

Powder coatings are applied as free-flowing, dry powders. These coatings are dry, meaning they don't require a solvent to keep the components together. Powder coatings are applied using either an electrostatic spray (see image right) or a fluidized bed. Parts are heated before or after application to fuse the particles together and bind them to the surface. Powder coatings are used mostly for coating metals, and may be thermoplastics or thermosets.

## Zigmachem - Specialty chemicals

The life & efficiency of any paint system is directly dependent on the preparation of the surface. About 60% of all coating failures are due to inappropriate handling of the product. Therefore, thoroughly knowing this aspect of painting is of critical importance. The [Zigma Paints \(P\) Limited](#), core competence has been in manufacturing and supplying not only industry specific but even product specific coating solutions to our customer. Our vast working experience has empowered us to provide time tested products which exactly meet the customer requirements.

### Features

With a range of special features, Industrial Paints are available:

- Heat resistant
- Electro resistive
- Suitable for touch up coatings
- Waterproof
- Fire retardant
- Anti static
- Rust preventive
- Elastomeric
- Water repellent

Based on the highest level of customer satisfaction **Zigma Paints (P) Limited** has a reputation as one of the leading [manufacturers and suppliers of industrial paints](#). We understand that not every surface is the same and the need for [industrial paint](#) solutions with prominence to other conditions may vary. Suiting the diverse requirements and conditions, our technologically advanced range of industrial paints offer best solutions. Our organization was

set up with a single goal of producing and providing high quality, customer specific coating solutions.
