

ALLARI INC | A Cybersecurity Services Company

Welcome to ALLARI INC, a US-based cybersecurity services company that offer various AI-based cybersecurity services from the last 23 years. We provide the latest artificial intelligence solutions to recognize zero-day attacks and prevent them from harming your business systems. By using our AI-based security systems, you can drive down the cost of protecting your organization without compromising on security. All of our solutions are combined under one roof to meet your needs. We take a very forward-thinking approach to security and the delivery of services, and we're eager to partner with you. Our [Cybersecurity Services](#) like MDR Cybersecurity, Darktrace POV, Vulnerability Managed Services, IT Managed Services & much more services which are very cost-effective.

• MDR Cybersecurity

MDR stands on Managed Detection and Response. Our MDR Services are designed for mid-sized to large companies which will protect the systems from upcoming cyber attacks. Our MDR security platform is considered an advanced 24/7 security control that often includes a range of fundamental security activities including cloud-managed security for organizations that cannot maintain their own security operations center. MDR services combine advanced

analytics, threat intelligence, and human expertise in incident investigation and response deployed at the host and network levels.

- **Darktrace POV**

Darktrace Proof of value is an AI-based service that will evaluate the vulnerabilities in your systems and help your enterprise to protect from them. Like ALLARI, which offers the [Darktrace POV](#) services which is a four-week free trial that allows you to evaluate your AI Enterprise Immune System & Threats. This new distribution model allows you to make an informed decision on whether to implement the current threat detection software in your own enterprise, prior to purchase.

- **Vulnerability Management Service**

[Vulnerability Management Services](#) will helps the IT enterprises to build an effective layer into your system which prevents your system from upcoming attacks & reduce the overall risk of threats. Like Allari that offers Vulnerability Management Services which helps you to identify and remediate vulnerabilities. Our managed service can quickly identify, classify and extract high-risk vulnerabilities through a combination of scanning your network, diagnosing Windows/Linux/Mac vulnerabilities, and using an industry-leading third-party service for web application scanning.
