

# Veneers in San Francisco – Achieve a Perfect Smile

[Veneers San Francisco](#) are thin, custom-made shells designed to cover the front surface of your teeth, enhancing their appearance. Typically crafted from porcelain or composite resin, veneers are bonded to your teeth to correct a variety of cosmetic issues, such as discoloration, chips, gaps, and misalignment.

Porcelain veneers are particularly popular due to their natural appearance and durability. They resist stains and mimic the light-reflecting properties of natural teeth, making them an excellent choice for a long-lasting, aesthetically pleasing smile. Composite resin veneers, on the other hand, are a more affordable option that requires less enamel removal during the application process.

The procedure for getting veneers typically involves a consultation to discuss your goals, followed by the preparation of your teeth, where a small amount of enamel may be removed to make room for the veneers. Impressions of your teeth are taken and sent to a lab, where your custom veneers are created. Once ready, they are carefully bonded to your teeth, resulting in a beautiful, natural-looking smile.
