16 Easy Tips for Mobile App Accessibility

Mobile app accessibility is perhaps the number one factor determining your app's success. It's because you don't know who will use your app once ready. There is a large number of your users who are disabled, having a motor, vision, learning, and auditory problems. And they have the right and need mobile app accessibility just like everyone else. And this is why to have an accessible app; you need to work at removing barriers and thus ensure everyone can use your app and its technology. Without doing so, you miss a large percentage of your audience!

So if you are building an app, it is a good rule to keep a few design principles in mind while making your app. They will help to optimize the users' experience and ensure maximum app reach and usage for everyone!
