7. Immunotherapy in Triple negative Breast cancer.

Breast cancer is a curable disease in majority of patients.

Before describing about treatment of breast cancer we need to not only look at the stage of breast cancer but also at different prognostic and predictive biomarkers.

Apart from the stage, these biomarkers tell us about the probability of relapse

So, we divide breast cancer according to stage and according to the hormone receptor status and genomics. (By looking at genes we can also say that what kind of genes are driving cancer and how aggressive these genes are).
