

What to Expect During Electrical Shutdown Servicing

So, What Is Electrical Shutdown Servicing?

[Electrical shutdown servicing](#) refers to “planned and controlled shutoff of electrical systems” in a building, facility or industrial plant for the purpose of maintenance, repair, inspection, and even for upgrades.

It’s like hitting the pause button on all power systems so teams can safely get in there, assess the health of the electrical infrastructure, fix anything that’s worn out, and ensure everything meets safety and operational standards before switching it back on.
